

Registry Editor process to fix network error code 0x80070035

Step 1: Open the Registry Editor

- Press the **Windows Key + R** on your keyboard to open the **Run** dialog box.
- Type **regedit** into the box and press **Enter**.
- Click **Yes** if a User Account Control prompt appears.

Step 2: Navigate to the Parameters Key

In the left pane of the Registry Editor, double-click folders to navigate to this exact directory path:

- **HKEY_LOCAL_MACHINE**
- **SYSTEM**
- **CurrentControlSet**
- **Services**
- **LanmanWorkstation**
- **Parameters**
- **Step 3: Create the New Value**
- **Right-click** on an empty space inside the right pane.
- Hover over **New** and select **DWORD (32-bit) Value**.
- Name the new entry exactly **AllowInsecureGuestAuth** and press Enter.

Step 4: Modify the Value Data

- **Double-click** the newly created AllowInsecureGuestAuth entry.
- Change the **Value data** field from 0 to 1.
- Click **OK**.

Step 5: Apply Changes

- Close the Registry Editor window.
- **Restart your computer** to apply the configuration and fix the sharing error.
